Currently, there is no example in the OpenAI Cookbook demonstrating how to integrate GPT-4 into a data cleaning pipeline for real-world data processing tasks. This feature would be highly beneficial for users working with noisy datasets.

Proposed Example: Use GPT-4 to handle missing or inconsistent data in CSV files.

- Demonstrate automatic data imputation using natural language context provided by GPT-4.
- Showcase a complete pipeline, from loading the dataset to generating clean, usable data.
- Benefits:-** Helps users automate data cleaning for natural language processing tasks.\n- Provides a practical application of GPT-4 in data science workflows.

Impact: This will serve as a valuable resource for data scientists and developers looking to integrate AI models into data preprocessing stages.
