Improve Documentation for API Rate Limits #173

Edit New issue

 Open VFA24SCM31V opened this issue yesterday · 0 comments

VFA24SCM31V commented yesterday

Collaborator ...

The current documentation lacks clear information on how API rate limits work, especially with different subscription tiers. It would be helpful to include:

1. Clear explanation of rate limits across various subscription plans.
2. Example code snippets that handle rate limiting in Python.
3. Guidance on how to handle rate limit errors and best practices for retrying failed requests.

This would greatly help developers understand and handle rate limits effectively in their applications.
